Engineering Projects

Movie Database Course
- Created a comprehensive course from scratch teaching how to build a movie database using CRUD operations.
- Utilized the MERN stack and demonstrated full-stack developer skills.

Employee Repository
- Built an employee repository that allows adding a user's name, age, and email.
- Implemented CRUD operations using MongoDB, Express.js, React.js, and Node.js.

jQuery Animation
- Developed a button that animates a jQuery logo to showcase different effects such as fading, resizing, and movement in various directions.
- This project involved using jQuery selectors, events, and effects.

React App
- Created a React project featuring clickable links, images, and buttons that respond dynamically to user interaction.
- Implemented components with JSX and worked with lists, among other functionalities.
